

“I wish I had an automatic water shut off”

Premium Discounts and Enhanced Protection of Your Valuables

Water heaters and washing machine hoses just do not last forever. These are the most common source of flooding in your home. What's next? Frozen and/or burst pipes. These events can cause catastrophic damage to your home and are easily prevented or their severity can be greatly reduced.

Automatic water shut offs turn off the water in your home. There are lots of ways to do this, but the bottom line is you can protect your valuables, prevent massive water damage, and reduce your insurance cost.

Peace of Mind

If you are out of town or just out around town, an automatic water shut off can provide you with the peace of mind that your home is protected from catastrophic flooding caused by a failure in your plumbing system.

- Point of use systems
- Whole house systems
- Sensor based systems
- Timer based systems
